---

## Professional Summary

---

I am currently pursuing a B.Tech in Computer Science Engineering from Uka Tarsadia University, with a primary focus on Cybersecurity and a strong interest in software and web development. I actively work on real-world projects, continuously enhance my technical skills through hands-on development and certifications, and showcase my work through GitHub. I am a motivated learner with a passion for building secure, scalable, and innovative digital solutions while growing as a cybersecurity professional and developer.

## Projects

---

### Reactjs-cryptojs-Based-project

Technologies: [React.js](#), [CryptoJS](#),[JavaScript](#) (76.3%), [CSS](#) (17.7%), [HTML](#) (6.0%)

This repository is a collection of secure, privacy-focused web applications built using React.js for the frontend and CryptoJS for data encryption. It contains several distinct mini-projects designed to demonstrate encryption in a web environment:

1. Anonymous-feedback-app
2. Encrypted-contact-book
3. Secure-daily-journal
4. Secure-expense-tracker
5. Secure-notes-app
6. Secure-todo-app

### smart-contract

Technologies: [JavaScript](#) (78.0%), [HTML](#) (8.9%), [CSS](#) (7.7%), [Solidity](#) (5.4%)

This repository contains the codebase for a Decentralized Application (DApp). It is structured into two main components:

backend: Contains the Solidity smart contracts, likely managing the blockchain logic and data storage.

frontend: Contains the user interface built with JavaScript, HTML, and CSS, designed to interact with the deployed smart contracts.

## ODOO\_SIGKILL\_BOTS

Technologies: [Flutter \(Dart\)](#), [Provider/Riverpod](#), [Dio](#),[Node.js](#), [Express](#), [PostgreSQL](#), [Socket.io](#),[Dart](#) (50.6%), [JavaScript](#) (41.7%), [C++](#), [CMake](#)

StackIt is a collaborative Q&A learning platform designed to facilitate knowledge sharing. It features a Flutter-based mobile frontend and a Node.js backend.

Key Features: User authentication, Question & Answer system, Real-time voting, Tag-based filtering, and a Notification system.

Architecture: It uses a REST API combined with Socket.io for real-time capabilities and PostgreSQL for data persistence.

## IHWP-Project

Technologies: [reactjs](#),[javascript](#)

This repository is a frontend web application initialized using Create React App. It contains the standard boilerplate structure for a React project, including the public assets and source code, intended as a foundation for building a user interface.

## interior-design

Technologies: [Nextjs](#),[Typescript](#)

This is a Next.js web application bootstrapped with create-next-app. It uses TypeScript and is set up for deployment on the Vercel platform (linked as [interiordesign-phi-three.vercel.app](#)). The project appears to be a foundation for an interior design website.

## moto-link-app

Technologies: [Flutter](#),[dart](#)

This repository contains the source code for a new Flutter application. It includes the default project structure and boilerplate code generated by the Flutter CLI, set up to build applications for mobile (Android, iOS), web, and desktop environments.

## Education

---

### Bachelor of Technology in Computer Science and Engineering

2026-06-30

[uka tarsadia university](#) | [surat,india](#)

GPA: 8.15

### Science

2022-03

[Samithi English Medium School](#) | [Surat](#)

## Certifications

---

Cybersecurity Job Simulation  
[Mastercard \(via Forage\) | 2025-10-01](#)

Cyber Job Simulation  
[Deloitte \(via Forage\) | 2025-10-01](#)

## Skills

---

Reactjs

Nextjs
